

TONAIRE WHITEPAPER V2

INTRODUCTION

Tonaire is created for the purpose of making value out of thin air.

Just like the Federal Reserve and the other central banks of the world are minting money in private institutions with the sole purpose of creating inflation that will lead to hyperinflation in the coming years.

Tonaire will do the same with the community but instead of making an inflationary asset, the \$TONO token will be a deflationary asset meaning the supply will lower on every transaction that is made.

Furthermore every holder of \$TONO will receive more \$TONO as reward for holding/supporting \$TONO in becoming the biggest BEP-20 token.

MISSION

Tonaire doesn't believe in the current crypto trends like the NFT hype and other ideas like “new platforms for DeFi” because they disappear as time goes on. The goal of every coin is to be high in valuation and maintaining a strong community of active participants. All the trends we see in the current crypto market are gimmicks that want to make the people think that they have something new to deliver while in all truth they are just doing the same.

Tonaire goes back to the essence of what crypto is and what the majority in the crypto community wants, that is an asset/token that rises in value in a fast pace and that at the same time is deflationary. Tonaire will become a top 50 token.

TOKENOMICS

TOTAL SUPPLY

1,000,000,000,000,000,000 (1 Quintillion)

CIRCULATING SUPPLY

400,000,000,000,000,000 (400 Quadrillion)

NO MINT FUNCTION

TOKENOMICS

\$TONO will have a 13% tax fee that includes the following:

5% of the transaction goes to the liquidity pool

5% of the transaction will be automatically burned

3% of the transaction will be reflected to all holders

PRESALE

Soft cap: 175 BNB

Hard cap: 350 BNB

Presale = 150,000,000,000,000,000 TONO

Public sale = 250,000,000,000,000,000 TONO

The BNB that will be raised on the presale will be used as liquidity for the public sale.

Any unsold tokens will be burned.

PRESALE

MARKETING

The marketing team keeps 7% out of the total supply. This percentage will be spent on marketing, influencers, partnerships and giveaways for making the Tonaire community grow. The 7% cut is needed because Tonaire has a long term vision in which Tonaire becomes the biggest BEP-20 token.

Imagine what will happen once Tonaire becomes a 100 million dollar market cap coin and 7 million dollars can be used for marketing, Tonaire will only become bigger and more known to the world.

The dev team keeps 3% out of the total supply. This percentage will be used to fund and kickstart future projects related to Tonaire.

BURNS

50% of the total supply will be manually burned after reaching higher holder amounts as will be revealed in the roadmap. That will further the price growth because of the scarcity. The burns will be in multiple parts. The whole 50% is not going to be burned at once.

ROADMAP

Tonaire is striving to be unique, so should the roadmap be. The roadmap is a big part of the growth and is taken seriously. For every amount of Tonaire holders (Tonaires) a piece of the roadmap will be unlocked. The way this roadmap is visualised brings a mysterious and surprising element with it, this causes excitement.

FUNDEMENTALS

The Binance Smart Chain has produced exponential growth after it's release on April 18th in 2019. The Binance Smart Chain is a blockchain that has been created by the community, therefore it is community driven just like Tonaire. At the start hundreds of developers and shareholders have joined the Binance smart Chain development team and together they've created the next generation of blockchain technology. The Binance Chain has made progress in creating fast and secure decentralized digital assets on a decentralized exchange. To make this happen the Binance Chain has to be built on a highly performant engine that distributes consensus. This is the heart of the Binance Smart Chain.

FUNDEMENTALS

The Binance Chain is a piece of art that provides the solution for a decentralized exchange, but it doesn't provide the freedom and flexibility for the developers of decentralized apps. This is where the Binance Smart Chain comes in place.

The Binance Smart Chain is the idea of a parallel blockchain that runs on the current Binance Chain. This will retain high performance and supports the idea of intuitive versions of smart contracts that are functional at the same time.

This innovative solution brings the interoperability and programmability of the Ethereum Virtual Machine to Binance chain. The Binance Chain and Binance smart chain allow transfers and communication between different parties, all thanks to the support of interoperability and the community.

The Binance DEX will remain a liquid exchange for assets on both chains. This will empower users to create their own decentralized apps and digital assets on the Binance Smart Chain. Tonaire has also been created on the Binance Smart Chain. This makes Tonaire a highly trustable token and gives the opportunity for growth and the creation of different idea's like TONOSWAP and a CEX [Centralized Exchange], see "TONOSWAP" and "CEX" for more explanation.

FUNDEMENTALS

The Binance Smart Chain brings two innovative technologies together. The low transaction costs and the fast block times. Old cryptocurrencies like Ethereum and Bitcoin have high transaction costs and a slow block time. These are problems that were expected and should be fixed to make cryptocurrencies be adopted by the mass and institutions. In combination with the Ethereum Virtual Machine and the cross-chain community it will enhance the functionality and creativity for developers on the Binance Smart Chain.

The Binance Smart Chain will help developers who want to build their own token and applications with the functionality of Binance Smart Chain Contracts. This is especially good for digital assets like Tonaire.

FUNDEMENTALS

The proposed Binance Smart Chain is unique for several reasons:

It's a sovereign blockchain, which will provide security and safety to all users and developers, just like how Tonaire is created.

It's EVM-compatible and will support all of the existing Ethereum tooling along with faster and cheaper transactions for Tonaire.

Its native dual chain interoperability will allow cross-chain communication and scaling of high-performance dApps that require fast and smooth user experience. With the help of this Tonaire will become a big network of different creations and innovative ideas.

Its on-chain governance with Proof of Staked Authority consensus, built on 21 validators who validate the transactions, will provide decentralization and enable significant community involvement. This makes Tonaire a trustable and anonymous token.

DECENTRALIZED TONOSWAP 1.0

TONOSWAP

Tonaire will release a fully functional decentralized exchange (DEX) on the Binance Smart Chain. This platform will be designed to allow people to securely trade \$TONO, BNB and a massive variety of other BEP-20 tokens without relying on a centralized service. All the trades made on TonoSwap will automatically execute via Tonaire's SmartContracts.

TONOSWAP

TonoSwap will be a DEX known as an automated market maker (AMM). This means that there are no order books, no bid/ask system and no limit/market orders.

TonoSwap will instead make use of liquidity pools in which users trading on the platform will automatically draw liquidity from the many liquidity pools available on TonoSwap which then rebalances after the trade is complete. Trades made on TonoSwap will subtract liquidity from one side of the pool and add liquidity to the other side of the pool, thereby changing the weights of the assets in that pool and their relative values.

TONOSWAP

The liquidity pools available on TonoSwap will be contributed by the people, who add equal values of both sides of a liquidity pool, for example TONO/BNB, to increase the total amount of liquidity available for TONO/BNB. The people who contributed to the liquidity pool will then receive LP tokens that represent their share in that particular liquidity pool. These tokens need to be returned in order to retrieve their fraction of the liquidity pool. For the people who will provide liquidity for the liquidity pool, the liquidity providers will receive a share of the transaction fees generated by any liquidity pool they contribute.

TonoSwap will be generally accessed through a supported Web3 wallet such as Metamask or Trustwallet. Once your wallet is configured to support Binace Smart Chain, these wallets can be used to interact with TonoSwap's SmartContracts via the TonoSwap's front-end.

TONOSWAP

TonoSwap will be built on the Binance Smart Chain, TonoSwap will provide an excellent trading experience to all the people, it will benefit from the lowest transaction fees and the fastest confirmation times, ensuring that the trades are executed quickly.

TONAIRE'S EXCHANGE (T-CEX)

T-CEX

Tonaire will release a fully functional decentralized exchange (DEX) on the Binance Smart Chain. This platform will be designed to allow people to securely trade \$TONO, BNB and a massive variety of other BEP-20 tokens without relying on a centralized service. All the trades made on TonoSwap will automatically execute via Tonaire's SmartContracts.

T-CEX

Tonaire's Exchange will be a centralized cryptocurrency derivatives exchange that offers futures, leveraged tokens and Over-The-Counter trading. The exchanges that offer futures trading suffer from many crippling flaws holding the space back. What Tonaire's Exchange will achieve is to solve these problems and move the derivatives space toward becoming the next big thing. Our goal is to become the first community driven centralized exchange whilst being the most profitable centralized exchange on the market.

ROADMAP 2022

Tonaire is known for being a community driven token. The development and marketing team are working closely together to steer Tonaire in the direction that the community wants Tonaire to go.

2022 will be the year of Tonaire with many great things to come that will realize our mission in becoming a top 50 token.

Expect the unexpected to happen and witness the exponential growth of Tonaire.

**THANK YOU &
WELCOME ABOARD**
